## Vincent's 1960 Beetle Limebug-Equiped Bug

Across the Pond in New York, Vincent has built one hell of a Type 1. Keeping it classy, this Ruby Red Beetle runs OE Smoothies, White Walls, alongside all of the original chrome parts. Against the opinion of many purists, Vincent decided his super clean '60 needed dramatic modification. He came to us, choosing to fit his ride with our Deluxe Air Suspension Kit. Maximising lows and driveability, the kit has completely transformed his chassis!

As of recent years, Vincent has upgraded to some of our latest parts. Swapping out his Gen I Rear Air System to a Cantilever Kit, plus an upgrade to our Management Cradle, to help manage his air install. Finallising the super-unique styling on his Bug, Vincent has strapped a Turbo Kit/Intercooler to the back. Taking up so much space, the car has to drive without a decklid; unconventional, but certainly very cool. Furthermore, a stinger pipe was added – As if the giant Turbo System wasn't enough...
