Instructions

Lay out the kit like below.

Attach the 4 long tubes to the bottom parts of the rack. Start on 1 side. Use thread lock like loctite brand.

Now attach the other side. Use thread lock.

Now flip over and install the 2 top tubes. Use thread lock.

Below is fully assembled. Make sure all screws are tight.

This is the clamp. It should be adjusted to be snug, not too tight (the clamps will bend and be useless) and the stainless bracket on the rear of the clamps should squeeze the rain gutter.

The lock nut should be tightened to hold in place. The tab may need bending to fit the

gutter properly. Shake the rack to see if it fits snug.

If not, adjust the rack to fit snugly. You may have to use a thicker sized rubber tube on the feet to get the proper fit for your vehicle. When installed properly, the rack will attach securely. Attaching to vehicle and / or loading with cargo is at your own risk.

The sticker faces out on each side.
